Instruction to the reviewers

Responsibility

The peer reviewer in respective field is responsible for critically evaluating the manuscript in and providing constructive and honest feedback to authors about their submitted article.

It is important for the Reviewer to discuss the weakness and strengths of the submitted paper, and evaluate the originality and relevance of the manuscript.

Before reviewing the manuscript, Kindly consider the following:

- Does the requested is in your related field? If the received manuscript is not matching with your field, please notify the Editor immediately.
- Do you have good time to review the requested paper? Please complete the review process within 7 days. If you do not think you can complete the entire review process within seven days, please let the editor know and if possible, suggest an alternate reviewer to complete the review process.
- Are there any potential conflicts of interests?
Please disclose all conflicts of interest to the editors before reviewing the manuscript. If you have any questions about potential conflicts of interests, please contact the editorial office.

The Review

Please keep the following during the review process:

- **Content Quality and Originality**

Is the article contributed significantly in respective field?

- **Clarity**

- Title of the manuscript: Does the title of the manuscript clearly describe the article?

- Abstract:

- Does the abstract reflect the content of the article?

- Introduction:

Does the introduction clearly describe what the author hoped to achieve clearly and accurately state the problem being investigated? Generally, the introduction of the paper should summarize relevant research to provide context, and explain what previous findings, if any, are being extended or challenged.

- Materials and method:

Does the author accurately explain how the data was collected and validated? If the present methods are new, are they explained in detail? Does the author been precise in describing measurements used for analysis?

- Results:

This is where the author/s should explain in words what he/she discovered in the research. It should be clearly laid out and in a logical sequence. You will need to consider if the appropriate analysis has been conducted. Are the statistics correct? If you are not comfortable with statistics, please advise the editor when you submit your report. Interpretation of results should not be included in this section.

- Discussion and Conclusion:

Are the claims in this discussion and conclusion section supported by the present results? Have the authors clearly indicated how the present study relates to expectations and to previous research? Does the article contradict or support previous theories? Does the conclusion of the manuscript is related?.

- Figure, Images and Table:

Are all figure, tables and images are appropriate?

Scope - Is the article in line with the aims and scope of the journal?
